

We, at the National Oil Reserves Agency (NORA), are committed to responsible energy management and will increase energy efficiency throughout our premises, facilities and equipment, wherever it is cost effective.

- NORA will improve its energy efficiency by monitoring, managing and reporting its energy use patterns.
- NORA commits to supporting a programme to reduce the company's energy use where practicable, provide oversight of progress and allocate responsibilities.
- Third party reports of energy costs at NORA's office at 7 Clanwilliam Square and at NORA's directly operated Oil Storage facilities will provide the ongoing basis to identify significant energy usage and identify opportunities for savings.
- Objectives and targets are set and reviewed to ensure the implementation of energy saving measures or activities together with allocation of adequate resources.
- NORA will implement the plan, including specific measures as appropriate, staff training if required and raise awareness of the advantages of an energy management plan.
- NORA will monitor implementation progress, measure savings relative to targets and evaluate the process for continuous improvement.
- The Operations Engineer is responsible for day-to-day implementation of the Energy Management Plan, reporting to the CEO.
- NORA will complete an Annual Energy Report for each year which will be included in the Company's Annual Report.

Pat Meehan
Chief Executive.
